

Burrangong Creek Beautification & Connectivity

Proposed SCF allocation: \$1,500,000

Background

Burrangong creek is one of the key natural features and attractors of the Young community and Hilltops area similar to the Boorowa River and Murrumbidgee Creek in Boorowa and Harden respectively. The Young community have gradually invested over the years in creating a more attractive, better utilised and connected creek precinct. A number of ideas, plans and environmental investigations have been developed in the past which will assist in informing the detailed scope of the project.

Scope

The detailed scope of this project will be further refined in consultation with the community but may include a combination of improving connectivity, environmental improvements and recreation/cultural features. The final scope is also likely to be impacted by how much the allocated funds can be leveraged with other sources such as community groups and State and Federal grant programs.

Project Snapshot

Note – the images provided below are not necessarily indicative of where any works will occur.
